

Davco provides an environment for **innovative** people developing proactive **industrial solutions.**

## Increase the efficiency of your modular home facility with the *Davco Dolly*

Lightweight, easy to handle and maintenance free, we custom design our product to fit your load transferring needs.

The dual flanged, self guided wheels are designed to eliminate problems due to rail misalignments. Removable axles allow for easy wheel or bearing replacements.

*"Davco took my rough design idea for a lighter weight dolly for moving modular home units to improve safety and dolly performance and carried the project through to completion . Davco's staff spent many hours researching engineered wheel materials and combined it with an aluminum frame to produce a dolly that far exceeded my expectations."*

**Chad Thompson**  
Director of Operations  
Haven Homes, Inc.

Available with an engineered sweeper plate option.
